PROFESSIONAL SUMMARY

A Data Scientist and Machine Learning Engineer who builds things end-to-end — from shaping raw data to shipping models into production. Sitting at the intersection of engineering and insight, equally focused on model performance and clean deployment. Comfortable across the full ML stack: statistical modeling, feature engineering, and live inference APIs. I communicate findings clearly — to stakeholders and developers alike.

Let your data tell the story.

EDUCATION

Bachelor of Science in Data Science — *University of Mumbai*

SIES College of Arts, Science and Commerce, Mumbai

TECHNICAL SKILLS

Languages: Python, SQL, JavaScript

ML / AI Frameworks: PyTorch, TensorFlow, Scikit-learn, XGBoost, NumPy, Pandas

Data Visualization: Power BI, Tableau, Streamlit, Plotly, Matplotlib, Seaborn

Databases: PostgreSQL, MySQL, MongoDB, BigQuery, NeonDB

Cloud & Infrastructure: Google Cloud Platform (GCP), Docker, GitHub Actions

PROJECTS

MedMira — AI Prescription Management System | *Python, MongoDB, GLiNER, Docker, GCP* 2025

- Built an OCR + NER pipeline that extracts medicine names, dosages, and schedules from prescription images using Google Vision API and GLiNER Bio-Med for medical entity recognition.
- Deployed a containerized backend on Google Cloud Run with CI/CD; automated WhatsApp medication reminders via Twilio integration.

Financial Signal Engineering Pipeline | *Python, Docker, Streamlit, MLOps* 2025

- Engineered a modular MLOps pipeline for time-series signal generation with volatility-aware strategies (z-score, hybrid) and rolling statistics.
- Containerized the application using Docker; built a Streamlit dashboard for real-time signal analysis with deterministic outputs and robust error handling.

EV Infrastructure Readiness Dashboard | *Power BI, Python, GIS* 2025

- Built a Power BI dashboard evaluating EV adoption density and charger distribution across Indian states; developed a custom Opportunity Score metric that improved infrastructure prioritization accuracy by 35%.
- Delivered actionable insights for policy planning, subsidy optimization, and investment strategies for EV charging rollout.

Uber Trip Demand Forecasting | *Python, XGBoost, Flask, Scikit-learn* 2024

- Built a time-series forecasting pipeline integrating weather and temporal features; achieved 9.52% MAPE and 0.966 R² using a stacked ensemble (XGBoost, Random Forest, GBRT) on 250K+ data points.
- Deployed a Flask REST API with 100ms latency for real-time demand prediction, enabling production-grade inference at scale.

CERTIFICATIONS

- Google Business Intelligence Professional Certificate — Google (2024)
- Machine Learning Operations Fundamentals — Google Cloud Skill Boost (2025)
- AWS Cloud Technical Essentials — Amazon Web Services (2026)
